- 4) Meeting with FMC. I am scheduled to meet with Barry Crawford of FMC later this week regarding their site on the Shoshone Bannock reservation in Pocatello, Idaho. They would like to do some redevelopment work on the site now that construction of the interim remedy is underway. Redevelopment of much of the site will be difficult because of the interim nature of the ROD and also because the site is heavily contaminated with elemental phosphorus that is being capped. There are also ponded areas that are active treatment sites under RCRA that have periodically had unplanned discharges of phosphine gas. It will be interesting to hear what their plans are. There may be some limited areas along the highway that could be redeveloped and we have heard about past proposals to put solar panels in that area. This meeting is being set up following some discussions that Mathy has had with FMC officials regarding their desire to redevelop the site.
